Education

- Bachelor of Technology in Electronics and Telecommunication**, VIT Pune, SPPU Aug 24– Present
Coursework: Object Oriented Software Development, Artificial Intelligence and Machine L, DB Design, Applied Distributed System.
- Diploma in Computer Engineering, Government Polytechnic**, MSBTE Mumbai. Aug 20– May 23
Relevant Coursework: Data structures, Computer Networking, Architecture and Operating System.

Skillset

Programming: C/C++, Java, Javascript, Python, HTML, CSS, Bootstrap, PHP, (ESP32 Arduino)
Web Services & Server: Flask, FastAPI, RESTful, Apache Tomcat (XAMPP), Firebase SDK, OpenAI, APIs, Streamlit.
Technologies & Tools: SQL server, Mongo DB, OpenCV, PDO, NLP, Linux, Web designing, ML Models, IoT, RoboFlow, Visual Studio, PyCharm, Eclipse, PHP, Ultralytics YOLO, Cisco Packet Tracer, Ollama, LStudio.
Databases: MySQL, MS Access, Mongo DB, JSON, Firebase real time DB.
Designing & Tools: Adobe Photoshop CS3, CC, Pr, Canva, RoboFlow, CapCut.
Project Utility & Build: GitHub, Google colab, Google Xsls.

Work Experience

Researcher | X-ray Segmentation and Landmark Detection Feb 25 - present

- Status:** ongoing
- Combined TotalSpineSeg's pretrained MRI-based segmentation approach with custom adaptations for X-rays, filling a niche gap. Introduced interactive coordinate extraction for surgery planning useful for robotic or IoT-assisted surgeries.
- Real-time Visualization:** Clear visual overlays with color-coded segmentation masks for different regions (e.g., spine, spinal canal, discs).

Database Coordinator | Vishwa Shauryam, VIT Pune Oct 24 – Present

- As a Database Coordinator for Vishwa Shauryam at VIT Pune, managed event registrations and participant data while ensuring real-time updates and data accuracy through effective communication with multiple committees.
- Developed skills in data coordination, stakeholder management, and analytics, enhancing organizational and leadership abilities for a large-scale collegiate event.

Researcher | IoT Smart Farming with AI&ML May 25

- Developed an IoT-based Smart Farming system to optimize agricultural operations by integrating sensors and microcontrollers for real-time monitoring, automated irrigation, and anomaly detection.
- Utilized AI and ML techniques for data visualization, CSV generation, and training predictive models to forecast future weather conditions, enhancing resource conservation and crop yield.

Computer Technician | Grampanchayat Amdapur June 23 – 24

- Provided IT support and maintenance for rural governance systems, educated villagers on digital services, promoting **rural digital empowerment**.
- Built strong community relations and understood ground-level tech challenges.

Cyber Security Management Program | ANZ Australia (Forage Virtual Internship) July 23

- Identified and reported phishing and suspicious emails, enhancing email threat detection skills.
- Investigated threats and understood organizational risk frameworks, contributing to effective security documentation and reporting.

Software Engineering Virtual Experience | JPMorgan Chase & Co. May 23

- Interfaced with JPMorgan's internal systems and developed solutions for financial data visualization, enhancing API integration and frontend-backend communication skills.
- Simulated real-world team collaboration in a fintech setting, gaining team-based development experience and practical knowledge of Git and version control.

Academic Projects

X-ray Segmentation Jan 25 - May 25

- Tech Stack:** Python, YOLOV8 seg large model, OpenCV, TotalSpineSeg, TensorFlow.
- Developed AI to segment spine and bone regions from X-ray images, integrating deep learning with medical image processing techniques such as Spine and its subsets.
- Improved the efficiency and accuracy of medical imaging processes, contributing to better patient outcomes in orthopedic and surgical procedures.

Heart Attack & Diabetes Prediction System Feb 25 – Mar 25

- Tech Stack:** Python, Flask, HTML, CSS, JS, Random Forest, Decision Tree, Matplotlib
- Data Collection and Model Training: Collected real-world health data through a Google Forms survey and trained machine learning models for risk prediction related to heart disease and diabetes, enabling accurate assessments based on user input.
- Interactive Dashboard Development: Built an interactive Flask dashboard to visualize health data using polygraphs, pie charts,

and comparison factors, facilitating real-time predictions by integrating the trained model with user inputs.

IoT Based Smart Farming for Sustainable Future

Jan 25 – May 25

- **Tech Stack:** ESP32, Arduino, DHT11, Soil Moisture & Light Sensors, Python, C++, Flask, Firebase, LoRa, HTML/CSS/JS, Pandas, Matplotlib, Machine Learning (Random Forest, Decision Tree).
- Developed a web-startable application wherein user can create and play Atari games like PacMan, SpaceInvader, etc. The architecture for this was developed considering Observable, Strategy and Command Design Patterns.
- Wrote Junit testcases to increase code coverage, used SonarQube quality check & bug analysis & deployed on AWS

Freshcery – Grocery Store Management System

Jan 25 – Jun 25

- **Tech Stack:** PHP, MySQL, JavaScript, Bootstrap, HTML/CSS
 - Implemented user authentication, product listing, and a dynamic cart badge to enhance user experience, while developing an admin panel for efficient inventory and booking management.
 - Created a cart system with session-based logic to effectively manage orders, ensuring a smooth checkout process.
-

Declaration

I hereby declare that the above-mentioned details are true and correct to the best of my knowledge and belief. My name is Yash Pawar, and I belong to Sawana, Taluka Chikhli, District Buldhana, Maharashtra. My date of birth is 09th March 2004, and my current age is 21 years. I have completed my Diploma in Computer Engineering from Government Polytechnic, Hingoli under MSBTE. Currently, I am pursuing my Bachelor of Technology at VIT Pune.

Date: 28/07/2025

Place: Pune
